

ANTON PLOTNIKOV

Engineering Team Lead, Transactions Platform · Paphos, Cyprus

plotnikovanton@gmail.com @pltanton github.com/pltanton pltanton.dev

KEY TECHNOLOGIES

I Go, Java/Kotlin/Spring, Linux, Docker, Kafka, Git

II AWS, K8S, Nix (NixOS), LaTeX, JS/TS

III Ruby, Python, Bash, C++, C, Lua, Haskell

EXPERIENCE

2026– **Wallet** · *Engineering Team Lead, Transactions Platform* Paphos, Cyprus
Development of a TON wallet, exchange and trading platform aka Telegram's @wallet.

- **P2P exchange** [Kotlin, Postgres]. Development of P2P exchange platform, analytic system, KYC, accounting.
- **Event management system** [Go, Kafka, Postgres]. I designed and built a real-time, high-availability analytics system that enables business event definition management for automatic type-strict code generation in multiple programming languages.

2021–2022 **Ozon Bank** · *Lead software engineer* St. Petersburg
Development of bank processing systems.

- **Processing** [Go, Postgres, ClickHouse, Kafka, K8S]. Development of bank processing system: system design, cryptography layer compatible with PCI DSS. Mentoring interns.

2020–2021 **Intellectokids** · *Software engineer* Remote
Backend and AWS infrastructure for a kids education platform (Go, Kotlin, AWS).

2018–2020 **DSX Technologies** · *Software engineer* St. Petersburg
Development of cryptocurrency exchange/trade platform.

- **DSX** [Kotlin, Java, Angular, Docker]: trade and exchange platform. Development of platform back-end, including: KYC/KYB system, exchange API, public UI API, authentication process, database and application design for clients' personal data; administration site for the support/AML team.
- **Student projects**: mentoring of student projects. *Subtyping system*: compile-time advanced extension for Java. *Rhea*: library for reactive reload of configuration properties with various data sources.
- **DSXT Hackathon**: participating in organisation and mentoring.

2017–2018 **Openway** · *Software engineer* St. Petersburg
Developing infrastructure components for build registration system and workflow processes.

- **Releng** [Kotlin, Java, Python, Docker, Jira, TeamCity]: support and development of automatic release registration system (build registration, release/upgrade notes reports, Jira plugin, CI support with TeamCity).
- **DMS** [Kotlin, Docker, Spring, React.js]: support and full stack development of distribution management system. The system stores and distributes business-specific product builds with their release/upgrade notes.

2016–2017 **T-Systems RUS** · *Intern* St. Petersburg
Full stack development of web micro-services mostly based on Ruby on Rails framework and PL/SQL. Java development. Technologies: PL/SQL, Oracle, Ruby on Rails, MySQL, Sinatra, CoffeeScript.

PROJECTS

Open source

- **Autobrowser** (github.com/pltanton/autobrowser): an efficient cross-platform tool to automatically open hyperlinks in different browsers depending on context (target app, etc.) with a flexible and easy-to-use custom configuration DSL.
- **DDC Sync** (github.com/pltanton/ddcsync): a utility to synchronise brightness of monitors in a multi-head setup by DDC protocol.
- **Network Widgets** (github.com/pltanton/net_widgets): a bunch of widgets which indicate the state of the current network connection without NetworkManager dependency, written in Lua for the *awesome* window manager.

Freelance

- **Ruby on Rails course for Geekbrains**: basic course of Ruby on Rails framework, designed for 8 lectures, which includes a presentation for a lecturer and a book with detailed course.

EDUCATION

2012–2018 **ITMO University** · *Master of Applied Math and Computer Science* St. Petersburg
Chair of Advanced Mathematics. Mathematical modeling.

LANGUAGES

Russian · English · Greek
