

ANTON PLOTNIKOV

Engineering Team Lead, Transactions Platform · Paphos, Cyprus

plotnikovanton@gmail.com · @pltanton · github.com/pltanton · pltanton.dev

KEY TECHNOLOGIES

I Go, Java/Kotlin/Spring, Postgres, Kafka, ClickHouse, Linux, Docker, Git

II AWS, K8S, Nix (NixOS), LaTeX, JS/TS

III Ruby, Python, Bash, C++, C, Lua, Haskell

EXPERIENCE

2022– **Walt (formerly Telegram Wallet)** · *Engineering Team Lead, Transactions Platform*
Paphos, Cyprus

Senior software engineer from 2022, team lead from 2026: I lead the team that owns the transaction core, from the ledger and processing to the data for analytics.

- **Ledger** [Kotlin, Postgres, Kafka]. I designed and built a new high-performance ledger service. I moved all accounts and the full transaction history out of the main monolith with zero downtime: historical migration, dual run, reverse replication and continuous reconciliation. The ledger is now the single source of truth for balances, with double-entry postings.
- **Processing service** [Go, Postgres, Kafka]. I led the design and implementation of the central processing service. Each process runs as an explicit state machine. The service is high-performance, fault-tolerant and redundant across data centers.
- **Platform**. I designed the Kafka event protocol and built the Kafka client library that most services use. Kotlin service template, shared Go libraries, Protobuf decoding for Kafbat, observability with OpenTelemetry and Pyroscope.
- **Data delivery** [Kafka, ClickHouse]. I led the move to near-real-time CDC replication of service data into ClickHouse.
- **Earlier work** [Kotlin, Go, Postgres, Kafka]. P2P exchange, accounting service, integration with a third-party KYC provider. Event management system: a real-time layer that delivers business events from services and the frontend to the data warehouse.

2021–2022 **Ozon Bank** · *Lead software engineer* St. Petersburg, Russia

Development of bank processing systems.

- **Processing** [Go, Postgres, ClickHouse, Kafka, K8S]. Development of bank processing system: system design, cryptography layer compatible with PCI DSS. Mentoring interns.

2020–2021 **Intellectokids** · *Software engineer* Remote

Backend and AWS infrastructure for a kids education platform (Go, Kotlin, AWS).

2018–2020 **DSX Technologies** · *Software engineer* St. Petersburg, Russia

Cryptocurrency exchange and trading platform.

- **Exchange backend** [Kotlin, Java, Docker]. KYC/KYB system, exchange and public APIs, authentication, storage design for clients' personal data, admin site for the support and AML team.
- **Mentoring**. Student projects: a compile-time subtyping extension for Java, a library for live reload of configuration. Organizer and mentor of the DSXT hackathon.

2017–2018 **Openway** · *Software engineer* St. Petersburg, Russia

Developing infrastructure components for build registration system and workflow processes.

- **Releng** [Kotlin, Java, Python, Docker, Jira, TeamCity]: support and development of automatic release registration system (build registration, release/upgrade notes reports, Jira plugin, CI support with TeamCity).
- **DMS** [Kotlin, Docker, Spring, React.js]: support and full stack development of distribution management system. The system stores and distributes business-specific product builds with their release/upgrade notes.

2016–2017 **T-Systems RUS** · *Intern* St. Petersburg, Russia

Full stack development of web micro-services mostly based on Ruby on Rails framework and PL/SQL. Java development. Technologies: PL/SQL, Oracle, Ruby on Rails, MySQL, Sinatra, CoffeeScript.

PROJECTS

Contributed Linux kernel · Kafbat UI · Nixpkgs · Home Manager · OmniWM

Own net_widgets (★176) · guided-review · d2-live · Autobrowser

EDUCATION

2016–2018 **ITMO University** · *Master of Applied Math and Computer Science* St. Petersburg, Russia

Chair of Advanced Mathematics. Mathematical modeling.

2012–2016 **ITMO University** · *Bachelor of Applied Math and Computer Science* St. Petersburg, Russia

Chair of Advanced Mathematics.
